

1. Temporal adjacency

if $\text{end}(A_1) \approx \text{start}(A_2)$
then $\text{adjacent}(A_1, A_2)$

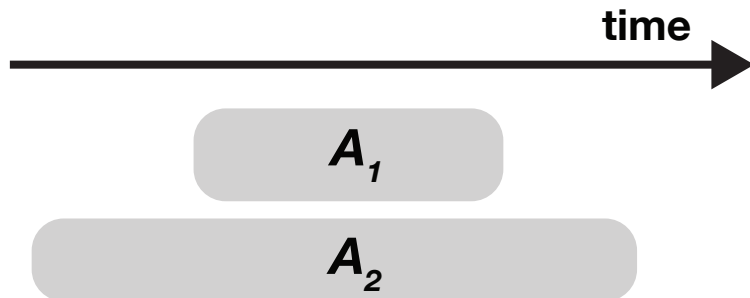

3. Equal start time

if $\text{start}(A_1) \approx \text{start}(A_2)$
then $\text{start-coincides}(A_1, A_2)$

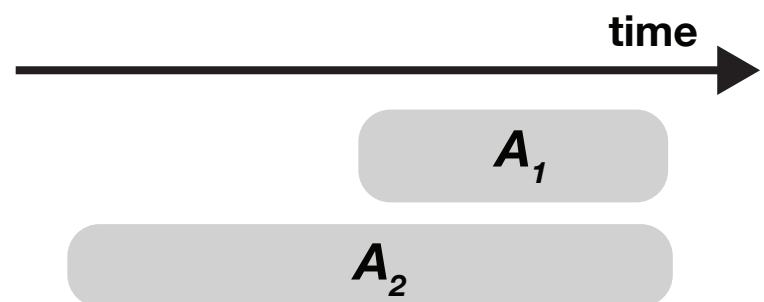

2. Temporal inclusion

if $\text{start}(A_1) > \text{start}(A_2)$ and $\text{end}(A_1) < \text{end}(A_2)$
then $\text{during}(A_1, A_2)$

4. Equal end time

if $\text{end}(A_1) \approx \text{end}(A_2)$
then $\text{end-coincides}(A_1, A_2)$

Where $\approx$ denotes approximative equality (± 100 ms)
and A_1, A_2 are unique identifiers of articulations
